Ting Yu Tsai

Albany, NY 12203 tiffany9056@gmail.com (no sponsorship required)

Education

- **University at Albany - SUNY** | **USA** | Ph.D. in Computer Science. Aug. 2023 ~ Present
- **National Taiwan University** | **Taiwan** | M.S in Biomedical Electronics and Bioinformatics. Aug. 2019 ~ Jul. 2021

Work Experience

- **Research Assistant** | *University at Albany-SUNY* Jan. 2024~Dec. 2024
  - **Project:** Cardiovascular Image Segmentation | **Language:** Python | **Library:** Pytorch
  - Conducted end-to-end model development and benchmarking for cardiovascular segmentation, integrating SAM and uncertainty-aware loss design to improve generalization and robustness medical dataset.
- **Process Engineer** | *Taiwan Semiconductor Manufacturing Co., Ltd. (TSMC)* Nov. 2021~Jun. 2022
  - Testing and monitoring equipment, updating current system processes and conducting risk assessments.
- **Software Engineer Intern** | *Test Research Inc.* Aug. 2019~Jul. 2021
  - **Project:** Super Resolution for X-Ray Images | **Language:** Python | **Library:** TensorFlow, Tensorlayer
  - The output image quality and enlargement computation time of the image is faster and better than 5 classic AI models and 4 Python's interpolation methods.
- **Software Engineer Intern** | *Chung Shan Medical University Hospital* Jul. 2018~Aug. 2018
  - **Project:** Automatic Head and Neck CT image Organ Circle Selection System | **Language:** Python
  - The system reduces the selection time by 70%.

Projects

- **IntelliCardiac** | *2025*
  - Developed an end-to-end clinical-style cardiac MRI platform for automated three cardiac components segmentation and five classes disease classification, with real-time visualization and workflow-ready deployment.
- **An Uncertainty-Aware Generalization Framework for Cardiovascular Image Segmentation** | *2024*
  - Developed and benchmarked UU-Mamba for cardiovascular segmentation, integrating Sharpness-Aware Minimization (SAM) with an uncertainty-aware composite loss, achieving SOTA performance on ACDC, ImageCAS, and Aorta.
- **Automatic Image Exposure Classification and Improvement System with Deep Learning Algorithms** | *2021*
  - The accuracy of the classification function in the system is 0.91. The enhanced image quality is sure to compete with those taken by cameras.
